

# Compost fermentation promotion sheet

The use of carbon-impregnated fiber enhances weather resistance, and the surface of the fabric is waterproofed to prevent rainwater. Since it is breathable and water permeable, it is a sheet that lowers the moisture regain while letting out water vapor.

With excellent waterproofness, breathability, and breathability, we will help you to compost with good quality.

Cost reduction can be expected in all compost facility environments.

Specification : 1.8m width × 100m length Material : Polyester 100%  
Also available sewing processing of sheet in accordance with the facility use area.
